

Metamorphism - Pan African to Alpine - its geodynamic implications

Conveners: Osman Candan, Donna L. Whitney & Roland Oberhänsli

We encourage all contributions concerning the metamorphic evolution from Pan African / Cadomian – Hercynian – Triassic to Alpine and later? This session on metamorphics shall gather the testimonies of geodynamic processes that led to the recent collage of terranes in Turkey. We would like to see contributions characterizing the different terranes such as Menderes, Kırşehir, Sakarya, Pütürge/Bitlis as well as the oceanic realms and sutures between these.
